

CONTROL4 WHEN >> THEN 1.2 RELEASE NOTES

INTRODUCTION

Control4 is excited to announce the release of When >> Then 1.2. In this new release, Control4 adds support for two major products:

- KNX keypads
- Door Station v1

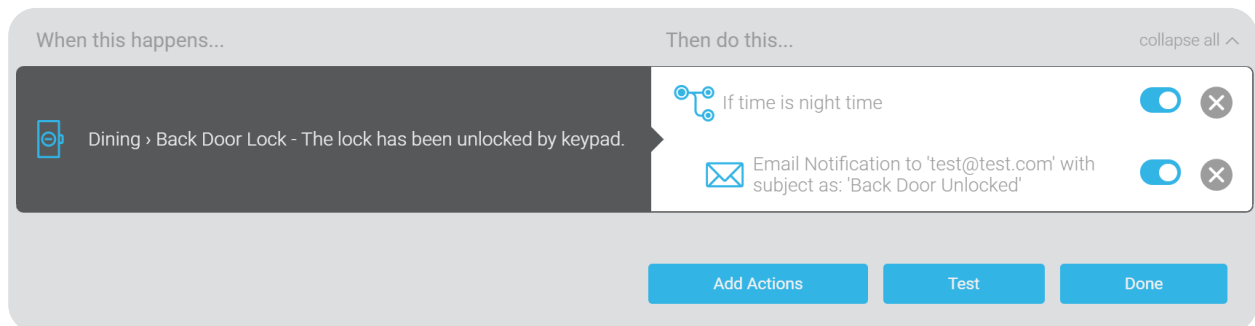

We are also adding support for conditional time statements. This is a powerful feature that will allow customers to gain higher control when personalizing their home.

NEW FEATURES

CONDITIONAL TIME STATEMENTS

Conditional time statements allow customers to specify exactly when a Then executes. Customers can select between certain hours, within a certain time relative to sunrise/sunset, during the day, or during the night.

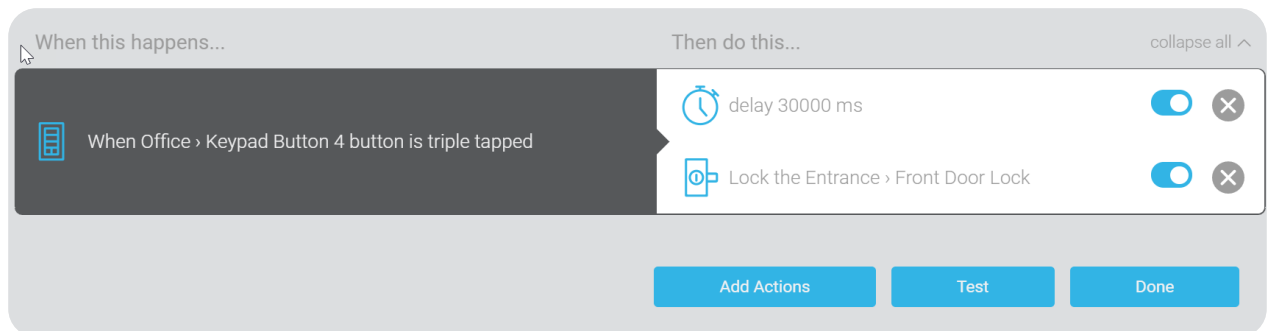

For example:

PROGRAMMABLE DELAY

Programmable delays allow customers to add a pause between a When and a Then, delaying the execution of the Then for seconds or minutes.

For example:

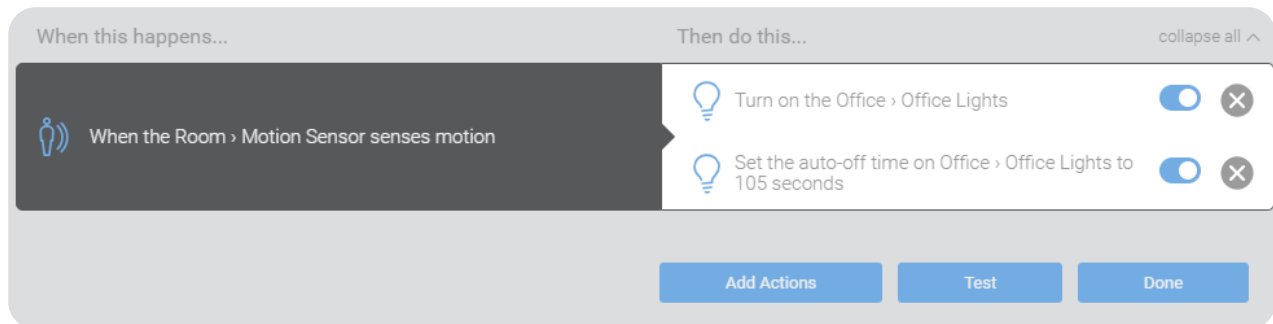

CONTROL4 WHEN >> THEN 1.2 RELEASE NOTES

SET, RESET, AND TURN OFF TIMERS ON LIGHTS AND FAN SPEED CONTROL

Customers can now set a timer for automatically turning off a light or a fan speed control after the specified time elapses. This feature gives customers peace of mind knowing, for example, that the closet light is not going to be on all day.

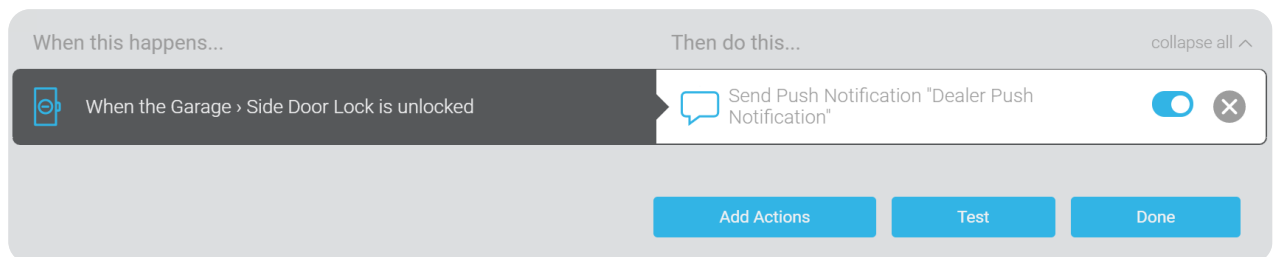

For example:

USE AN EXISTING PUSH NOTIFICATION

With this new feature, customers can now use dealer-created push notifications for their Then events. With this feature, customers can receive push notifications that are already familiar to them.

For example:

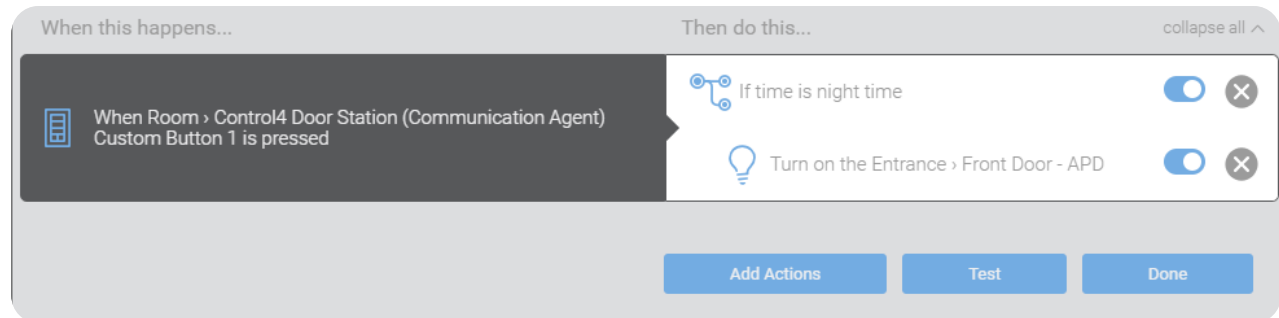

CONTROL4 WHEN >> THEN 1.2 RELEASE NOTES

DOOR STATION V1 SUPPORT

When >> Then 1.2 adds support for the Control4 Door Station v1. Customers can personalize what happens when the door station button is pressed. For example:

OTHER FEATURES

- Support for KNX keypad button presses
- Support for selecting a Listen or Watch source in a room that supports the source
- Support for filtering selector when selecting media to play. Easier to find albums, stations, etc. in long lists of media.

MAJOR BUG FIXES IN THIS RELEASE

- DT-820: Back button leads to dead-end in when then.
- DT-878: Doorbell icon missing.
- DT-796: Heat sensor icons missing.
- DT-795: Drop-down widgets on Firefox not consistent with other browsers.
- DT-794: Thermostat icon is missing.
- DT-770: When based on a scheduled event should eliminate action schedules as an option.
- DT-761: Setting auto off for a fan fails.
- DT-745: Create a new schedule - The default start time is fixed at 12:34 PM. It should default to the current time.
- DT-687: Cancel button does not always take you to the same place.
- DT-682: Selecting a playlist in W>>T actions displays improperly.
- DT-576: Creating voice scenes with long names hangs the client.
- DT-573: When editing an existing schedule, the Save button is missing.
